

## **Abertis' CDP rating is upgraded for its commitment to environmental sustainability**

- **The company has been recognised with an improved rating for its commitment and transparency in the fight against climate change**
- **CDP (Carbon Disclosure Project) is one of the world's most prestigious non-profit environmental action disclosure organisations**
- **Abertis' rating has improved thanks to its decarbonisation strategy and commitment to electrification and energy efficiency**

**Barcelona, 28 April 2025** – CDP (Carbon Disclosure Project) has recognised Abertis by upgrading its annual rating, in recognition of its progress and performance in climate change management. This upgrade mirrors the company's sustained commitment to sustainability and its firm commitment to cleaner and more environmentally friendly mobility.

CDP, an international non-profit organisation with the world's largest dataset on environmental action, promotes transparency and leadership, investors, companies, cities, and national and regional governments to make positive decisions for the planet. This year, it has assessed more than 22,700 companies.

Abertis' rating has been upgraded thanks to the development and application of an environmental strategy that includes progressive decarbonisation plans throughout its infrastructure management, with the aim of continuously reducing its emissions. The company is also rolling out energy efficiency and fleet electrification solutions, measures that bolster its commitment to more sustainable mobility. This strategy is part of a global approach that integrates ESG (environmental, social and governance) criteria in all its corporate decisions.

*"Having our rating upgraded by the CDP is a recognition that validates our strategy and reinforces our determination to keep on moving towards a more resilient infrastructure model and integrating positive decisions for the planet,"* said Georgina Flamme, Director of Sustainability at Abertis..

The new CDP rating supports Abertis' positioning as an operator committed to sustainability and reinforces its alignment with the Sustainable Development Goals (SDGs).
