

Emovis opens the free flow toll of the Mersey Gateway Bridge in the United Kingdom

- The bridge connects the towns of Runcorn and Widnes, in the Liverpool metropolitan area
 - The vehicles must register on the website to obtain a sticker that allows them to be identified when crossing the bridge
-

Barcelona October 17, 2017

Emovis, the Abertis subsidiary dedicated to the development and management of technology and information services, has launched last week a free flow toll - without barriers-the Mersey Gateway Bridge, in the city of Liverpool (United Kingdom).

The bridge, with more than 2 kilometers and three lanes per direction, connects the towns of Runcorn and Widnes and represents an important channel of communication between the North-west of England and the rest of the country.

Emovis uses optical character recognition technology to identify vehicles that go over the bridge. Those must have a sticker in the windscreen, associated with a bank account, in order to charge payment. They can request it by registering at <https://www.merseyflow.co.uk/> .

About Emovis

Emovis is the leading service delivery and technology arm of Abertis in the global markets for all electronic tolling and smart mobility solutions.

With over 550 employees across 7 countries, Emovis operates in Europe and America from its headquarters in France.

Is currently under the division of Abertis Mobility Services, along with Eurotoll.
